## Orienge Conterra 2.2 Focuses on Scalability and Enhanced Productivity

New York, New York, December 18, 2012 – Orienge, LLC (“Orienge”) releases the latest version of the [Orienge Conterra Enterprise Content Management \(“ECM”\) system](#), Conterra 2.2. The new release is aimed at satisfying various user requests related to [core ECM modules](#) and supporting the implementation process with Workflow Analysis tools. Built on upgraded web access and IS-Builder platform, Conterra 2.2 delivers scalability and convenient tools to enhance productivity.

The new **Web Access** now allows users to **preview** documents and design **covers** for every folder. The **IS-Builder 7.10** platform includes consistency and performance improvements, while guaranteeing efficient work and better user experience for more than 10,000 users:

- **Object Hints** are designed to provide users with appropriate information on the object they are working with (User, Organization, etc.). Frequently selected users (or user groups) are also displayed while entering the Task Route field.
- New options have been added to the **search criteria**: Version size, Size of all versions and “Me” value. Search in User trees is also complemented by additional requisites.
- A **Favorites node** in User tree can be used to facilitate the process of assigning access rights.

Improved data security is ensured by **preventing databooks from showing all records** and **hiding organizational structure**.

The new **Conterra Integration Toolset (CIT)** in Conterra 2.2 also provides data exchange between different systems (e.g. Conterra and SAP or Microsoft Dynamics). CIT is a flexible feature which allows synchronizing references, managing objects from external systems, and viewing connected documents.

The [Records Management](#) solution is upgraded to provide links between records, including links between electronic and non-electronic records. The new **Milestones** feature added in the [Contract management](#) solution enables managers and employees to track the contract lifecycle stages and receive notifications. New Conterra reports such as **Pivot Table of Document Circulation Volume** or **Summary of Work Done** allow customers to streamline the company efficiency.

“Significant amounts of work have been done to meet all the market expectations,” said Daniel P. Shields, President and CEO of Orienge. “In this new Conterra release, we focused on the most important characteristics such as scalability, reliability and data security. Through the add-on enhancements, Conterra 2.2 enables companies to achieve greater performance improvement with easier deployment and use. The company’s plans for the future include the platform advancement and consistent expansion in ready-to-use Conterra-based [business solutions](#) to meet [customer challenges](#).”
